NOTES

- This list covers the period going from the end of the French BYZ (blue, yellow, zinc) period, in 1992, to the introduction of the New Parts numbering system, in 2001.

Strictly speaking, the end of the French BYZ period happened only in 1995, when the sets 1 to 6 of the Basic and Techno series, of 1991, were phased out. Yet, we consider that the end of that period came before, in 1992, when the last sets (7 to 10) of the traditional range were phased out. This point of view is enhanced by the fact that no new sets on the BYZ colour scheme were introduced after 1992.

Some of the sets of the new Dynamic series, introduced in 1993, came in a red, yellow, zinc scheme. Yellow is still the old French yellow, but red is a new shade, with a tinge of orange. Same red is used on some sets of the Starter Series, hence calling it Starter/Dynamic red.

The Collection Series is introduced in 1995, followed by the Evolution Series, in 1996. They come mainly in a yellow, red, zinc colour scheme. Both the red and the yellow are darker, richer shades than their predecessors. We called them Evolution/Collection red and yellow.

The change to these new yellow and red was also applied to the few sets that remained which had been introduced prior to 1995, as was the case of the Motorbikes set 4016 and the Master Builder set 7064. Yet, during a transition period, many instances are known where these sets came with a mix of Starter/Dynamic red and Evolution/Collection red parts. It came to the point of finding, for instance, two parts #53 Evolution red, and three Dynamic red in the same set box...

The new Mission Universe Series is introduced in 1997. It comes in a white, black, orange, colour scheme. And this is the last consistent colour scheme ever to be used by Meccano.

From here on, colour euphoria (colour madness?) takes hold of Meccano. Every single new set comes in new colours. Some of them are acceptable. Others, though, are simply outrageous..

Please see colour/material codes and notes at the bottom

Part Number		Col		Part Name		Year	Found in sets / / notes
Old	New	our	Mat			Intr.	

2 On the above list, where the “Year of Introduction” column was left blank for a given part, it means that the part was in use before 1993.
Parts that were available during the period, but were included in no set, are duly noted.
Introduction dates for new parts or existing parts in new colours are noted on the “Year of Introduction” column. For the same parts, information is provided on the “Found in Sets / Notes” column, regarding the sets or series where they were included.
For a complete information on the sets in which any part was used, please refer to the same Author’s “Set Parts Lists 1970 – 2014”, available for download at:
<http://timedwards.meccanoindex.co.uk/meccano/partslist.php>

3 The colour and finish variants of any part included on this list are exclusively the ones that existed, either in sets or as spares, during the period to which the list refers.
This means that this list does not include colour or finish variants of a part, which existed only in earlier or later sub-periods of the complete 1970-2014 period covered by our research.
As a consequence, if you want to know all the colour variants of a given part that existed from 1970 to 2015, you have to check all the four sub-period lists that cover that time span (1970-1981 UK, 1970-1992 France, 1993-2001 and 2001-2015). These can be downloaded from the author’s website, at:
http://meccano.planetaclix.pt/IIIAP70-11_1.htm

4 In 2001 Meccano replaced their traditional Parts Numbering System by a new one. New Part Numbers were allocated only to parts that were being used in the sets that were current at the time. As parts that had a number under the old system came to be used in newly introduced sets, a new part number was allocated to them.

New Part Numbers allocated to parts that had an old system number are of the type “**Axxx**” (meaning the letter “**A**” followed by a three digit number). The only exceptions to this rule concern parts No. 6, No. 115d and No. 162d, which were renumbered as B146, B115 and B175.
As a side note, entirely new parts are allocated numbers “**Bxxx**”, “**Cxxx**”, etc.
Under the new numbering system (as under the old one) part numbers ignore the different colours or finishes a given part may be presented in.
The column “Part Number / New” contains the new Part Numbers allocated to the parts included on this list.
A blank entry means that the part was not included in sets current in 2002, or introduced from then on.
As evidenced by the Spare Parts Catalogue of 1977, all the parts that were used in No. 10 sets were still available, at least up to that year. We have reasons to believe that they were available until 2001, but this is an unconfirmed guess.
In 2002, all parts that were not used in sets current at the time (and consequently had not been allocated a new part number) were made unavailable, and were removed from the spare parts list.
At a later stage new part numbers were allocated to existing stocks of parts that were not used in sets. These were made available to a few Meccano dealers, on a “while stocks last” basis.
